SKILLS

Programming Languages: Java, Python, Go, C++, C, JavaScript, TypeScript

Web and Application Development: React (Hooks, Redux, Thunk, Sagas), Angular, HTML5, CSS3, Tailwind CSS, Bootstrap, Node.js, Express.js, .NET, REST API development, Python APIs

Databases: MongoDB, SQL, PostgreSQL, PL SQL, DynamoDB

Design and UI Tools: Figma, Wireframing, Interactive Prototyping, Design Systems, Accessibility, Adobe XD

Cloud and Enterprise Platforms: AWS, Google Cloud Platform GCP, SAP, ServiceNow ITSM, Unix tools

Architecture and SDLC: Microservices, Distributed Systems, System Design, API integrations, OAuth2 authentication, performance tuning, Agile Scrum

AI and Intelligent Automation: ServiceNow Assist, Claude AI, OpenAI APIs, LLM integrations, workflow automation

Monitoring and Security: Logging, diagnostics, error handling, data integrity, incident management, Wireshark, Snort, Autopsy, Docker, Jira

EXPERIENCE

Full Stack Engineer - DTE Energy, Detroit MI

Jan 2026 - Present

- Built React energy dashboards serving 2.3M customers achieving 23% faster rendering in 3 months using Redux optimization.
- Engineered Java and Python microservices for smart meter data ingestion and transformation enabling scalable analytics pipelines.
- Implemented OAuth2 and JWT authentication enabling secure API communication across distributed microservices.
- Optimized API orchestration and caching achieving 25% faster reporting performance in 8 weeks.
- Prototyped LLM assisted developer tooling using Claude AI and OpenAI APIs improving engineering productivity.

Full Stack Engineer - Rivian Systems, Virginia USA

Mar 2025 - Jan 2026

- Built full stack insurance workflow platforms using React, Node.js, Java, and Python achieving 21% faster portal performance in 10 weeks.
- Designed backend APIs and database schemas enabling policy lifecycle processing and compliance reporting.
- Implemented Redux and Context state management achieving 18% reduction in form submission errors.
- Integrated SQL and MongoDB services enabling structured financial workflows across distributed microservices.
- Improved API reliability and latency by 15% through optimized request validation and orchestration.

Software Engineer II - Mphasis HP Printers and Servers, Bengaluru India

Feb 2022 - Jul 2023

- Built enterprise dashboards for HP printer and server infrastructure achieving 20% faster UI responsiveness in 3 months.
- Optimized Python backend indexing achieving 35% faster device lookup performance.
- Reduced monitoring latency by 30% through optimized real time telemetry workflows.
- Designed Kubernetes CI CD pipelines using GitHub Actions improving deployment speed by 40%.
- Enhanced backend reliability with structured logging and diagnostics.

Software Engineer I - Eduflex, Bengaluru India

Apr 2021 - Jan 2022

- Led independent frontend revamp of ERP platform achieving 35% performance improvement in 10 weeks.
- Built accounting and payment modules integrated with Python APIs enabling reliable financial workflows.
- Developed reusable React UI components improving development velocity by 50% while working independently.
- Implemented caching strategies improving UI state updates by 28% across ERP dashboards.

Web Development Trainee - GUVI IITM Research Park, Chennai India

Dec 2020 - Apr 2021

- Developed SPA applications using React and Python APIs achieving 20% faster UI responsiveness.
- Optimized component lifecycle improving frontend state updates by 18%.

Software Development Intern - TechCiti Pvt Ltd, Bengaluru India

May 2020 - Nov 2020

- Built responsive React UI components improving interface responsiveness by 20% in 4 months.
- Implemented REST APIs using Node.js and Python improving backend reliability through validation.
- Resolved frontend rendering issues caused by frequent API updates improving UI performance by 18%.

EDUCATION

Master of Science Computer Science - University of the Pacific

Aug 2023 - May 2025

Bachelor of Technology Computer Science Engineering - SVIT

Jun 2016 - Apr 2020
